

# MUHAMMAD FAKHRI HELMI

PETROLEUM ENGINEER | PROJECT COORDINATION | WELL INTEGRITY | DRILLING OPERATIONS

Jakarta, Indonesia | +62 852-6150-5740 | [muhhammadfakhrihelmi@gmail.com](mailto:muhhammadfakhrihelmi@gmail.com) | [linkedin.com/in/fakhri-helmi](https://www.linkedin.com/in/fakhri-helmi)

## PROFESSIONAL PROFILE

Petroleum Engineering graduate with hands-on experience coordinating upstream oil and gas projects across well integrity, wellhead/X-mas tree maintenance, conductor and completion-riser studies, and drilling engineering. Combines field-service planning, HSE and contractor readiness, technical reporting, project economics, commercial control, and client-facing delivery. Built data-driven and interactive 3D tools to translate complex well operations into clear decisions. Ambitious to grow in oil and gas through drilling, wellsite, field/service, operations, technical engineering, or project roles with increasing field responsibility.

## CORE COMPETENCIES

Well Integrity & Barrier Awareness • Wellhead/X-mas Tree Maintenance • Drilling Engineering & Well Planning • Torque, Drag, Tension & Buckling • Crew, Equipment & Mobilization Readiness • HSE Plan, JSA & Risk Assessment • Project Planning, P&L & Invoicing • Technical Data Analysis, Reporting & Client Presentation

## PROFESSIONAL EXPERIENCE

**PT ASIA SERV INDONESIA — Asia Serv Future Leader / Project & Technical Coordinator** Jul 2025 – Sep 2026

***PHE OSES Project — Well Integrity, Wellhead & X-mas Tree Maintenance***

- Coordinated two vessel-based field-service crews delivering approximately 84 inspection, testing and maintenance well visits per month; supported achievement of the 2025 annual target of about 1,000 wells.
- Managed project delivery from P&L forecasting, HSE Plan and bridging documents through crew/equipment readiness, permit support, execution monitoring, quality follow-up, invoicing and Service Performance Review presentations; maintained project margin above 10%.
- Coordinated corrective-action follow-up as operable-valve performance improved from 53% to 68% (+15 percentage points) using a consistent measurement method, while personnel One SIKA and BSS readiness reached 100% (16/16).
- Built a Well Integrity Management System consolidating 7,713 valve-inspection and 1,418 troubleshooting records, with plan-versus-actual tracking, pressure mapping, integrity status, visit history and interactive 3D wellhead/X-mas tree visualization.

Digital project evidence: [View WIMS Project Coordinator 3D Storyboard](#)

- Built an Excel/VBA invoice-summary workflow and introduced earlier document-signature controls, helping reduce the typical invoice-to-payment cycle from 3–4 months to approximately 1.5 months.
- Contributed to zero recordable incidents in the H1 2026 review period (9,624 safe man-hours) and to the wider PHE OSES five-million-safe-man-hour milestone; supported approximately IDR 2 billion in contract upselling opportunities.

***INPEX Masela Project — Conductor & Completion Riser Technical Analysis Support***

- Acted as the technical and client interface between INPEX and the specialist consultant for conductor and completion-riser analysis, coordinating study inputs, scope/P&L follow-up, technical queries, action tracking and presentation readiness.
- Coordinated closure of 26 client comments and issuance of a 94-page conductor-analysis report covering well loads, soil interaction, axial movement, offsets, wave-induced fatigue and vortex-induced vibration.

**PT PERTAMINA DRILLING SERVICES INDONESIA — Drilling Engineer Intern**

Jul 2023 – Sep 2023

- Reviewed Daily Drilling Reports and analyzed drilling time, NPT, BHA/downhole tools and operational events to support concise engineering insights for drilling-performance discussions.
- Used Halliburton Landmark WellPlan concepts to evaluate drillstring/BHA behavior and strengthen practical understanding of well planning, drilling mechanics and field operations.

## EDUCATION

**UNIVERSITAS PERTAMINA — B.Eng. / S1 Petroleum Engineering**

Sep 2020 – Aug 2024

GPA: 3.31/4.00 | Jakarta, Indonesia

***Selected Academic and Technical Projects***

**Drillstring Design and Mechanical Load Analysis — Undergraduate Thesis**

2024

- Compared three drillstring designs for the final 8½-in. section of an anonymized J-type directional well using Landmark WellPlan and manual checks for torque, drag, tension, stress and sinusoidal/helical buckling.
- Recommended Design A by optimizing component/HWDP selection without changing total BHA length; simulation-to-manual MAPE was approximately 8.5% for torque and 27% for tension.

**Alpha-05 Integrated Drilling Project — Jakarta Drilling Society**

2026

- Developed a browser-based 3D well-construction animation to communicate trajectory, casing, BHA, hydraulics, anti-collision, torque-and-drag considerations and drilling risks.

Interactive project: [View Alpha-05 Drilling 3D Animation](#)

### **Integrated Field Development Plan and Petroleum Economics — Capstone Project**

2024

- Developed production forecasts and project economics covering CAPEX/OPEX, NPV, IRR, payback and a three-well break-even case; the modeled company economics favored PSC Gross Split over Cost Recovery under the project assumptions.

Interactive case study: [View Simprug Field Development 3D Economic Case Study](#)

### **ADDITIONAL PROJECT LEADERSHIP**

---

- Supported three upstream tender opportunities covering well integrity and technical studies, with two awarded; coordinated readiness evaluation for 12 personnel and 28 primary/backup equipment categories within three weeks.
- Prepared 10 first-time OSES personnel through contract/JSA briefings, competency checks, equipment familiarization and field-readiness training; all mobilized and none were rejected by the client.
- Coordinated the 2026 OSES contract transition for eight personnel across two vessel crews, including HSE Plan, bridging, PTW and mobilization documentation, enabling operational continuity without crew demobilization.

### **TECHNICAL SKILLS**

---

**Engineering:** Halliburton Landmark WellPlan/EDM, Compass, StressCheck, IPM-PROSPER, CMG; torque & drag, directional-well mechanics, nodal-analysis fundamentals, reservoir-simulation exposure. **Digital & Business:** Advanced Excel/VBA/macros, Python fundamentals, JavaScript/Node.js, Three.js, Power BI, Microsoft Office, technical dashboards, project P&L and reporting.

### **SELECTED TRAINING AND CERTIFICATIONS**

---

IDTC BOP Level 1 • IWCF Level 1 • Well Operations Crew Resource Management • Directional Drilling Essentials • Fluid Systems for Drilling, Workover & Completions • Basic Safety Training • Accounting & Cost Management for Oil & Gas

### **PROFESSIONAL AFFILIATION**

---

Jakarta Drilling Society — Active Member (May 2026–Present): industry knowledge sharing, drilling-project collaboration and professional networking with upstream practitioners.

### **LANGUAGES AND MOBILITY**

---

Bahasa Indonesia (Native) • English (Professional Working Proficiency) • Open to field/site work, rotation, shifts and deployment across Indonesia
